

## Poor Boy Sound System

PNR DIV I Mini Meet Clinic

By Marvin Selzer

May 16, 2015

I started with a plastic tackle box. Next time I will make a proper box of 1/2 inch birch plywood, sized for 4" speakers.

The box has three sound modules with room and speakers for 6 modules. Some modules have one sound and some have two sounds. Select push buttons to suit. My modules are from ITTProducts.

I used 2" salvaged speakers and would not recommend these. The speakers are mounted with screws, next time I will mount them with silicone sealer. I would also make some sort of enclosure for the speaker backs.

I recall the module manufacturer recommended a good power supply. Mine is from Radio Shack, about \$10.00.

[www.RAMRCandRAMTrack.com](http://www.RAMRCandRAMTrack.com) (regular advertisers in NMRA Magazine)

Ram and ITT modules are about \$35.00

[www.fantasonics.com](http://www.fantasonics.com) (60 minute CD's and sound modules)

Radio Shack has a module that can record about 20 seconds of whatever you would like.

About 10 -15.00 dollars.
